Deckard's Dream free impro #1

frederic.font

Free improvisation with [Deckard's Dream](#) DIY polyphonic analogue synthesizer (a [Yamaha CS-80](#) inspired polyphonic synth). I have only built 3 voice cards so far so I can't play more than 3 notes simultaneously, but still it was a lot of fun to improvise with that. Also the keyboard I'm using does not do polyphonic aftertouch (or MPE), therefore aftertouch modulations are applied to all voices. Aaaaand also my keyboard playing skills are very limited so the thing will most likely feel musically very repetitive... But hey, the timbres are nice, aren't they? Hope you like it!
